Doctoral Schools in Poland

(Information compiled and edited by Prof. Phong B. Dao from AGH University of Krakow)

updated on 07.05.2026

I. Overview

Doctoral schools are a new form of education introduced in Poland for individuals pursuing a doctoral degree. They were established under the Act of 20 July 2018 – Law on Higher Education and Science (Journal of Laws of 2023, item 742, as amended). The primary objective of doctoral schools is to raise the quality of doctoral education in Poland and to transform it into a more elite and structured academic experience. These schools aim to better prepare doctoral candidates for careers in science, academia, and high-level industry positions. Currently, 142 doctoral schools at universities, institutes of the Polish Academy of Sciences and research institutes operate in Poland.

Key characteristics of doctoral schools include:

- **Eligibility:** Admission is open to individuals holding a master's degree or an equivalent qualification.
- **Tuition:** Education is free of charge.
- **Financial Support:** Every doctoral student enrolled in a doctoral school receives a monthly scholarship (stipend).

Doctoral students who commenced their education before the introduction of doctoral schools continue their studies under the previous system. Additionally, individuals who do not enter a doctoral school may still pursue a PhD through the extramural (self-study) path, allowing them to prepare and defend a doctoral dissertation independently.

Below is key information about several prominent doctoral schools, including their affiliated universities, locations, and available data on student enrollment and websites.
